Journal of Materials Processing Technology 116 (2001) 318–322

Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 116

Abductive neural network
Free-form surface rebuild using an abductive neural network, 170
Abrasive wear behavior
An investigation of the abrasive wear behavior of ductile cast iron, 176
Aluminium-matrix composite
Forging of 2124/SiC_p composite: preliminary studies of the effects on microstructure and strength, 289
Analysis of variance (ANOVA)
A note on the determination of optimal cutting conditions for surface finish obtained in turning using design of experiments, 305
Analysis system
Analysis system. Prerequisite for automation in metal-forming technology, 55
Analytic hierarchy process
Integration of expert system with analytic hierarchy process for the design of material handling equipment selection system, 137
Artificial neural network
Prediction of the flow stress of 0.4C–1.9Cr–1.5Mn–1.0Ni–0.2Mo steel during hot deformation, 211
Aspherical lens
Local material removal mechanism considering curvature effect in the polishing process of the small aspherical lens die, 298
Axisymmetrical part
Computer simulation of the rheological forming of an axisymmetrical part at room temperature, 91

Back propagation
Prediction of the flow stress of 0.4C–1.9Cr–1.5Mn–1.0Ni–0.2Mo steel during hot deformation, 211
Blackboard model
Research on hybrid expert system application to blanking technology, 95
Blanking technology
Research on hybrid expert system application to blanking technology, 95
Burnishing process
Study on the aluminum alloy burnishing processing and the existence of the outstripping phenomenon, 88

Carbides
Wear of coated and uncoated carbides in turning tool steel, 49
Cavity
Numerical simulation of cavity damage evolution in superplastic bulging process, 224
Ceramic
Combustion synthesis of hexagonal boron–nitride-based ceramics, 161
Channel section with outer edge
The effects of forming parameters in the roll-forming of a channel section with an outer edge, 205
Chemical mechanical polishing
A study of carrier motion on a dual-face CMP machine, 194
Chip breaking
Micro-temperature manipulation in cryogenic machining of low carbon steel, 22
Chip strain
Performance evaluation of cemented carbide tools in turning AISI 1010 steel, 16
Coated and uncoated carbide tools
Cutting performance and wear characteristics of PVD coated and uncoated carbide tools in face milling Inconel 718 aerospace alloy, 2
Coating
The effect of a coating on the springback of integrated circuit leadframes, 231
Cold rolling mills
A set-up model for tandem cold rolling mills, 269
Cold strip rolling
Third-power spline function strip element method and its simulation of the three-dimensional stresses and deformations of cold strip rolling, 235
Comb cracking
Performance of cutting fluids during face milling of steels, 244
Combustion reduction reaction
Effect of material characteristics on the ignition of the combustion reactions induced by ball milling, 124
Combustion synthesis
Combustion synthesis of hexagonal boron–nitride-based ceramics, 161
Computer simulation
Computer simulation of the rheological forming of an axisymmetrical part at room temperature, 91
Control
Formation and control of strip scale pores in hot rolling, 201
Coulomb friction
A class of slipline field solutions for metal machining with Coulomb friction at the chip–tool interface, 278
Cryogenic cooling
Beneficial effects of cryogenic cooling over dry and wet machining on tool wear and surface finish in turning AISI 1060 steel, 44
Cryogenic machining
Micro-temperature manipulation in cryogenic machining of low carbon steel, 22
Current
Investigation on the influence of machining parameters when machining tool steel using EDM, 84
Cutting fluids
Performance of cutting fluids during face milling of steels, 244
Cutting force
Performance evaluation of cemented carbide tools in turning AISI 1010 steel, 16
Micro milling of pure copper, 39
Cutting temperature
Micro-temperature manipulation in cryogenic machining of low carbon steel, 22

Elsevier Science B.V.
PII: S0924-0136(01)01173-6

Cutting-edge
Manufacturing models for the design and NC grinding of a revolving tool with a circular arc generatrix, 114

Damage evolution
Numerical simulation of cavity damage evolution in superplastic bulging process, 224
Damage law
Finite element simulation of fine blanking processes using a pressure-dependent damage model, 252
Deburring
Aspects of surface and edge finish by magnetoabrasive particles, 77
Die pressure
Erratum to "The process sequence design of a power-assisted steering part" [J. Mater. Process. Technol. (2001) 87–92], 310
Die steel for plastic mould
Prediction of the flow stress of 0.4C–1.9Cr–1.5Mn–1.0Ni–0.2Mo steel during hot deformation, 211
Different specimens
A system for evaluating sheet formability using tensile tests with different shapes of specimens, 189
Displacement
Analysis system. Prerequisite for automation in metal-forming technology, 55
Ductile cast iron
An investigation of the abrasive wear behavior of ductile cast iron, 176
Dwell time
Local material removal mechanism considering curvature effect in the polishing process of the small aspherical lens die, 298

EDM
Investigation on the influence of machining parameters when machining tool steel using EDM, 84
Electrode wear rate
Investigation on the influence of machining parameters when machining tool steel using EDM, 84
Elliptical polishing area
Local material removal mechanism considering curvature effect in the polishing process of the small aspherical lens die, 298
Envelope theory
Determination of spherical cam profiles by envelope theory, 128
Experiment
Finite element simulation of fine blanking processes using a pressure-dependent damage model, 252
Expert system
Research on hybrid expert system application to blanking technology, 95
Integration of expert system with analytic hierarchy process for the design of material handling equipment selection system, 137
Extrusion
Erratum to "The process sequence design of a power-assisted steering part" [J. Mater. Process. Technol. (2001) 87–92], 310

Face milling
Cutting performance and wear characteristics of PVD coated and uncoated carbide tools in face milling Inconel 718 aerospace alloy, 2
Performance of cutting fluids during face milling of steels, 244
Fill rate
Effect of kanban size on just-in-time manufacturing systems, 146
Fine blanking
Finite element simulation of fine blanking processes using a pressure-dependent damage model, 252
Finite element
Finite element simulation of fine blanking processes using a pressure-dependent damage model, 252
Finite strip method
The effects of forming parameters in the roll-forming of a channel section with an outer edge, 205
Finite-element method
Computer simulation of the rheological forming of an axisymmetrical part at room temperature, 91
Flake-like oxide debris
Tool life and wear mechanisms of TiN coated tools in an intermittent cutting operation, 10
Flank wear
Wear of coated and uncoated carbides in turning tool steel, 49
Flow stress
Prediction of the flow stress of 0.4C–1.9Cr–1.5Mn–1.0Ni–0.2Mo steel during hot deformation, 211
Forging
UBET and TEUBA: fast methods for forging simulation and preform design, 62
Forging of 2124/SiC_p composite: preliminary studies of the effects on microstructure and strength, 289
Formation
Formation and control of strip scale pores in hot rolling, 201
Forming parameters
The effects of forming parameters in the roll-forming of a channel section with an outer edge, 205
Fracture
Finite element simulation of fine blanking processes using a pressure-dependent damage model, 252
Free-from surface
Free-form surface rebuild using an abductive neural network, 170

Gravity casting
A study on the qualities of GTA-welded squeeze-cast A356 alloy, 101
Grinding burn
Studies on the grinding characteristics of directionally solidified nickel-based superalloy, 165
Grinding mechanism
Studies on the grinding characteristics of directionally solidified nickel-based superalloy, 165
Grinding ultra-precision substrates
A study of the total thickness variation in the grinding of ultra-precision substrates, 182
GTA-welding
A study on the qualities of GTA-welded squeeze-cast A356 alloy, 101

Heat-activated combustion reaction
Effect of material characteristics on the ignition of the combustion reactions induced by ball milling, 124
Helical flute
Manufacturing models for the design and NC grinding of a revolving tool with a circular arc generatrix, 114
High-energy ball milling
Effect of material characteristics on the ignition of the combustion reactions induced by ball milling, 124
Hot formability
Forging of 2124/SiC_p composite: preliminary studies of the effects on microstructure and strength, 289
Hot rolling
Formation and control of strip scale pores in hot rolling, 201
Hybrid knowledge representation
Research on hybrid expert system application to blanking technology, 95
Hypocycloid
A study of carrier motion on a dual-face CMP machine, 194

Indentation
Erratum to "The process sequence design of a power-assisted steering part" [J. Mater. Process. Technol. (2001) 87–92], 310
Integrated circuit
The effect of a coating on the springback of integrated circuit leadframes, 231
Inverse problem
Manufacturing models for the design and NC grinding of a revolving tool with a circular arc generatrix, 114

JIT
Effect of kanban size on just-in-time manufacturing systems, 146

Kanban
Effect of kanban size on just-in-time manufacturing systems, 146

Leadframes
The effect of a coating on the springback of integrated circuit leadframes, 231
Liquid nitrogen
Beneficial effects of cryogenic cooling over dry and wet machining on tool wear and surface finish in turning AISI 1060 steel, 44
Local removal rate
Local material removal mechanism considering curvature effect in the polishing process of the small aspherical lens die, 298
Low carbon steel
Micro-temperature manipulation in cryogenic machining of low carbon steel, 22

Machining
Developments in applications of PCD tooling, 31
A class of slipline field solutions for metal machining with Coulomb friction at the chip–tool interface, 278
Magnetoabrasive particles
Aspects of surface and edge finish by magnetoabrasive particles, 77
Manufacturing model
Manufacturing models for the design and NC grinding of a revolving tool with a circular arc generatrix, 114
Martensitic matrix
An investigation of the abrasive wear behavior of ductile cast iron, 176
Material handling system
Integration of expert system with analytic hierarchy process for the design of material handling equipment selection system, 137
Material removal rate
Investigation on the influence of machining parameters when machining tool steel using EDM, 84
Mathematical model
Manufacturing models for the design and NC grinding of a revolving tool with a circular arc generatrix, 114
Mechanical properties
Development of Ti–6Al–4V sheet with low temperature superplastic properties, 265
Metal forming
Analysis system. Prerequisite for automation in metal-forming technology, 55
Micro end milling
Micro milling of pure copper, 39
Micro machining
Micro milling of pure copper, 39
Micro tool
Micro milling of pure copper, 39
Micro/macro adhesion and abrasion
Tool life and wear mechanisms of TiN coated tools in an intermittent cutting operation, 10
Microstructure
Development of Ti–6Al–4V sheet with low temperature superplastic properties, 265
MMC
Developments in applications of PCD tooling, 31
Multi-layer perceptron
Prediction of the flow stress of 0.4C–1.9Cr–1.5Mn–1.0Ni–0.2Mo steel during hot deformation, 211

NC grinding
Manufacturing models for the design and NC grinding of a revolving tool with a circular arc generatrix, 114
Nickel-based materials
Cutting performance and wear characteristics of PVD coated and uncoated carbide tools in face milling Inconel 718 aerospace alloy, 2
Nickel-based superalloy
Studies on the grinding characteristics of directionally solidified nickel-based superalloy, 165
NiTi fiber
Constitutive modeling of aluminum matrix NiTi fiber-reinforced smart composite, 219
Numerical simulation
Numerical simulation of cavity damage evolution in superplastic bulging process, 224

One-dimensional model
A set-up model for tandem cold rolling mills, 269
Orthogonal arrays
A note on the determination of optimal cutting conditions for surface finish obtained in turning using design of experiments, 305
Outstripping phenomenon
Study on the aluminum alloy burnishing processing and the existence of the outstripping phenomenon, 88

Particle settling
Settling of silicon carbide particles in cast metal matrix composites, 72
PCD
Developments in applications of PCD tooling, 31
Planarization
A study of carrier motion on a dual-face CMP machine, 194
Plastic deformation
Tool life and wear mechanisms of TiN coated tools in an intermittent cutting operation, 10
Polycrystalline diamond tools
Study on the aluminum alloy burnishing processing and the existence of the outstripping phenomenon, 88
Power-steering worm blank
Erratum to "The process sequence design of a power-assisted steering part" [J. Mater. Process. Technol. (2001) 87–92], 310
Preston equation
Local material removal mechanism considering curvature effect in the polishing process of the small aspherical lens die, 298
Pull system
Effect of kanban size on just-in-time manufacturing systems, 146
PVD TiN coating
Tool life and wear mechanisms of TiN coated tools in an intermittent cutting operation, 10

Regression
Prediction of the flow stress of 0.4C–1.9Cr–1.5Mn–1.0Ni–0.2Mo steel during hot deformation, 211

Reverse engineering
Free-form surface rebuild using an abductive neural network, 170
Revolving tool
Manufacturing models for the design and NC grinding of a revolving tool with a circular arc generatrix, 114
Rheological forming
Computer simulation of the rheological forming of an axisymmetrical part at room temperature, 91
Roll-forming
The effects of forming parameters in the roll-forming of a channel section with an outer edge, 205
Rotary-table vertical-spindle surface grinding
A study of the total thickness variation in the grinding of ultra-precision substrates, 182

Scale pores
Formation and control of strip scale pores in hot rolling, 201
Scratch pattern
A study of carrier motion on a dual-face CMP machine, 194
Secondary shear zone thickness
Performance evaluation of cemented carbide tools in turning AISI 1010 steel, 16
Self-propagating high-temperature synthesis
Combustion synthesis of hexagonal boron–nitride-based ceramics, 161
Sensors
Analysis system. Prerequisite for automation in metal-forming technology, 55
Set-up model
A set-up model for tandem cold rolling mills, 269
Shape-memory effect
Constitutive modeling of aluminum matrix NiTi fiber-reinforced smart composite, 219
Sheet formability
A system for evaluating sheet formability using tensile tests with different shapes of specimens, 189
Simulation
Effect of kanban size on just-in-time manufacturing systems, 146
A set-up model for tandem cold rolling mills, 269
Simulation tests
A system for evaluating sheet formability using tensile tests with different shapes of specimens, 189
Slipline field solutions
A class of slipline field solutions for metal machining with Coulomb friction at the chip–tool interface, 278
Smart composite
Constitutive modeling of aluminum matrix NiTi fiber-reinforced smart composite, 219
Spherical cam
Determination of spherical cam profiles by envelope theory, 128
Springback
The effect of a coating on the springback of integrated circuit leadframes, 231
Squeeze casting
A study on the qualities of GTA-welded squeeze-cast A356 alloy, 101
Staggered-incremental-iterative
Thermal–mechanical model of warm powder compaction process, 67
Sticking and slipping zone
A class of slipline field solutions for metal machining with Coulomb friction at the chip–tool interface, 278
Stress–strain relationship
Constitutive modeling of aluminum matrix NiTi fiber-reinforced smart composite, 219
Strip
Formation and control of strip scale pores in hot rolling, 201
Strip element method
Third-power spline function strip element method and its simulation of the three-dimensional stresses and deformations of cold strip rolling, 235
Sub-surface damage
Developments in applications of PCD tooling, 31
Superplastic bulging
Numerical simulation of cavity damage evolution in superplastic bulging process, 224
Superplasticity
Development of Ti–6Al–4V sheet with low temperature superplastic properties, 265
Surface finish
Developments in applications of PCD tooling, 31
Beneficial effects of cryogenic cooling over dry and wet machining on tool wear and surface finish in turning AISI 1060 steel, 44
Aspects of surface and edge finish by magnetoabrasive particles, 77
A note on the determination of optimal cutting conditions for surface finish obtained in turning using design of experiments, 305
Surface integrity
Aspects of surface and edge finish by magnetoabrasive particles, 77
Surface roughness
Performance evaluation of cemented carbide tools in turning AISI 1010 steel, 16
Study on the aluminum alloy burnishing processing and the existence of the outstripping phenomenon, 88
A study of carrier motion on a dual-face CMP machine, 194

Taguchi techniques
A note on the determination of optimal cutting conditions for surface finish obtained in turning using design of experiments, 305
Tensile tests
A system for evaluating sheet formability using tensile tests with different shapes of specimens, 189
Test method
A system for evaluating sheet formability using tensile tests with different shapes of specimens, 189
TEUBA
UBET and TEUBA: fast methods for forging simulation and preform design, 62
Thermo-elastoplastic
Thermal–mechanical model of warm powder compaction process, 67
Third-power spline function
Third-power spline function strip element method and its simulation of the three-dimensional stresses and deformations of cold strip rolling, 235
Three-dimensional analysis
Third-power spline function strip element method and its simulation of the three-dimensional stresses and deformations of cold strip rolling, 235
Tilting
Analysis system. Prerequisite for automation in metal-forming technology, 55
Titanium alloy sheet
Development of Ti–6Al–4V sheet with low temperature superplastic properties, 265
Tool life
Micro milling of pure copper, 39
Performance of cutting fluids during face milling of steels, 244

Tool steel
Wear of coated and uncoated carbides in turning tool steel, 49
Tool wear
Cutting performance and wear characteristics of PVD coated and uncoated carbide tools in face milling Inconel 718 aerospace alloy, 2
Beneficial effects of cryogenic cooling over dry and wet machining on tool wear and surface finish in turning AISI 1060 steel, 44
Total thickness variation
A study of the total thickness variation in the grinding of ultra-precision substrates, 182
Turning
Performance evaluation of cemented carbide tools in turning AISI 1010 steel, 16
Wear of coated and uncoated carbides in turning tool steel, 49
A note on the determination of optimal cutting conditions for surface finish obtained in turning using design of experiments, 305
Turning steel
Beneficial effects of cryogenic cooling over dry and wet machining on tool wear and surface finish in turning AISI 1060 steel, 44

UBET
UBET and TEUBA: fast methods for forging simulation and pre-form design, 62
Uniform distribution
Settling of silicon carbide particles in cast metal matrix composites, 72
Upper bound
UBET and TEUBA: fast methods for forging simulation and pre-form design, 62
Upsetting
Erratum to "The process sequence design of a power-assisted steering part" [J. Mater. Process. Technol. (2001) 87–92], 310

Warm compaction
Thermal–mechanical model of warm powder compaction process, 67
